DETAILED ACTION

Allowable Subject Matter

Claims 1, 3-9, 12-17 and 19 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose storing the values of a parameter or each parameter in an attenuation matrix, the parameter capable of being used to compensate losses due to echoes, feedback or ambient noise, as required by claim 1. Finn, Roddy, and Moyski disclose processes which transmit an acoustical signal via an electrical path from a first electro-acoustic means to a second electro-acoustic means, determine a parameter of the acoustic path between the sending point and the receiving point, and generate a compensating acoustic signal via the second electro-acoustic means. However, none of the cited references disclose storing the values of the parameters in an attenuation matrix, which is the allowable claim feature. With regard to claims 12 and 19, the claims requires a controller for the determination of the transmission path as well as for the detection of at least one parameter of an associated transmission function, at least one level meter arranged in combination with at least one echo canceller between the sending point and the receiving point for the control of the signal level at a given position along the transmission path. Finn is the only cited reference which discloses a controller for the determination of the transmission path and the detection of at least one parameter of an associated transmission function. Nonetheless, Finn does not disclose nor suggest a level meter arranged in combination with the echo canceller 85 and connected to the controller.
